PVC Floor Tiles – Installation Guide

Step	Process Description
1	Surface Preparation – Clean, dry, and level subfloor.
2	Moisture Check – Ensure acceptable moisture levels.
3	Acclimatization – Store tiles 24 hrs at room temperature.
4	Layout Planning – Plan alignment and minimize cutting.
5	Adhesive Application – Apply evenly if required.
6	Tile Placement – Press firmly to avoid air gaps.
7	Cutting – Use sharp knife for precision edges.
8	Rolling – Use roller to secure bonding.
9	Curing – Avoid heavy traffic for 24–48 hrs.
10	Final Inspection – Verify alignment and finish quality.

Maintenance Guidelines

Category	Recommendation
Cleaning	Regular sweeping or vacuum cleaning.
Chemicals	Use mild detergents only.
Protection	Use pads under heavy furniture.
Handling	Avoid dragging heavy equipment.
